

Taylor Mitchell

Full-Stack Engineer

Toronto | 647-618-9872 | taylor.j.mitchell@gmail.com | taylormitchell.org

Experience

Senior Software Engineer - Ideaflow

Toronto ON, August 2022 - Present

- Led successful Product Hunt launch (highest voted product of day), including scaling infrastructure and rapidly delivering an iOS version of our web app with minimal codebase changes in a tight timeframe.
- Scaled engineering team from 2 to 7 through comprehensive hiring and onboarding program. Implemented structured onboarding enabling engineers to contribute on day one, along with mentorship practices and technical documentation.
- Transformed development process by implementing engineering best practices: automated testing, PR checklists, error reporting, analytics, and AWS monitoring. Introduced structured planning to convert founder vision into clear technical roadmaps.
- Designed and maintained complex graph-based data model supporting real-time collaborative editing. Implemented optimistic updates with transactional guarantees across distributed system.
- Built sophisticated React-based UI using custom hooks, MobX state management, and performance optimization techniques. Integrated GPT-based summarization features.

Data Engineer - IBM Consulting

Toronto ON, February 2019 - December 2021

- Designed and implemented REST API backend for crisis evacuation web application, working closely with frontend teams to define clear interfaces. Application has since helped evacuate thousands of families.
- Optimized Python ETL pipeline using vectorized operations and performance profiling, achieving 10x throughput improvement and reducing runtime from days to hours.
- Developed fuzzy matching system processing 30M records using Python and Go, delivering accurate results within strict timeline.
- Led production support for \$1.3M NLP processing solution on AWS, managing client relationships, bug prioritization, and feature development.
- Built ML model serving infrastructure with REST API supporting inference and retraining, as part of \$1.5M manufacturing advisory system.
- Founded and led mentorship program supporting dozens of new data scientists and engineers.

Data Scientist - EMD Serono

Toronto ON, April 2018 - February 2019

- Applied data exploration, visualization, and machine learning models to identify the drivers of churn.
- Translated roughly defined business questions and goals into concrete questions to answer with data.

Mechanical Designer - Consultec Ltd

Toronto ON, May 2015 - December 2017

- Designed industrial processing plant layouts in close collaboration with engineers, managers, and clients.
- Built internal software to automate tasks and provide custom tools for our 3D modeling software.

Technical Skills

- **Full stack web:** TypeScript, React, Express, PostgreSQL, GraphQL, AWS, HTML/CSS 4 years
- **Data Engineering:** Python (numpy, pandas), Go, ETL pipeline design, performance optimization 2 years
- **Infrastructure:** AWS, CloudWatch, monitoring, logging, automated testing, CI/CD

Education

- **University of Toronto** - B.S. in Mechanical Engineering and Robotics May 2013

Extra Curricular

- **Gymnastics** - Medalist at Canadian Championships and still do it for fun.
- **Personal productivity tools** - I've built a number of tools to help me stay organized and productive. Command line tools for [notes](#) and [todos](#), various flashcard tools, [kindle highlight exporter](#) and [logging web app](#). You can find them all in the same mono-repo [here](#), which itself is a neat project/experiment.
